DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "to make as good as possible" in claim 3 is a relative term which renders the claim indefinite. The term "to make as good as possible" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. One of ordinary skill in the art would not be able to make or use the claimed invention. The phrase "to make as good as possible" makes the value the equivalent impedance vague and indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Goto US Patent 5,786,737.

Goto discloses a main line 2 and a plurality of stubs (impedance transformation network) 3a and 3b. Between the stubs, switching FETs 4a, 4b, 4c are disposed, and the length of the stubs connected to the main line 2 can be changed by on-off operation of the switching FETs 4a, 4b, and 4c. The FET used as the switching FET should have a low loss in the on-state and its input/output ports should have characteristics similar to total reflection in the off-state. This FET can be realized by employing a FET whose gate width is relatively wide. (See col. 4, lines 41-64, figures 1 and 4b)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Asyasli et al US Patent 5,012,123.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
